Chiller Proof Booth

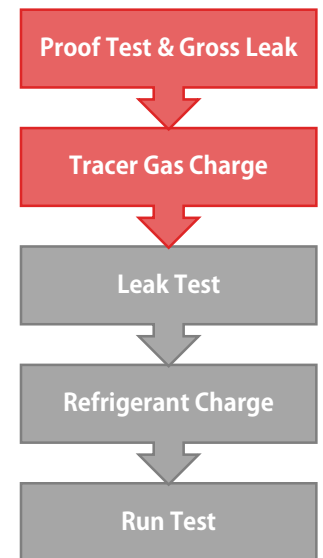

Specifications

- **Product:** Chillers
- **Proof Pressure:** 390 psig
- **TAKT Time:** 140 Minutes
- **Foot Print:** 18' x 18' x 11'
- **Weight:** 45,000 lbs.
- **Installation Date:** 2018

The Chiller Proof Booth is engineered to be a turnkey system that provides proof pressure and leak testing on medium pressure refrigerant chiller sub-assemblies.

This robust carbon steel Blast Booth provides protection to the operator and critical equipment in the case of a blast load failure during testing. The large swing out doors allow for easy, single operator transportation in and out of the booth. Testing pressures vary from 180 psig to 390 psig to accommodate different types of testing per customer request. After proof test, units can be filled with a Helium tracer gas for sniffer leak testing.

Other Test Systems Available.
