Gas Furnace Run Tester

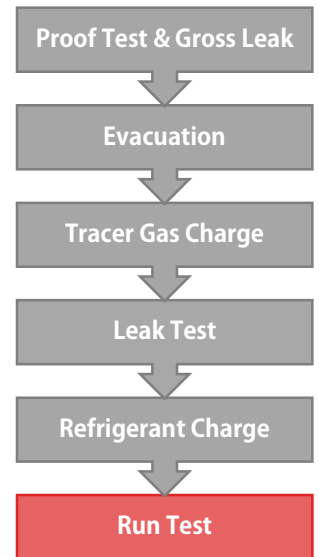

Specifications

- **Product:** Gas Furnace
- **TAKT Time:** 3 Minutes
- **Hi-Pot Tests:** AC, DC, IR, Continuity
- **Measures:** Volts, Amps, BTUs
- **IO:** Software Configurable
- **Test Sequence is User Configurable**
- **Installation Date:** 2019

VTI's Gas Furnace Run Tester is engineered to provide reliable Run, Electrical and Functional tests for Gas Furnace manufacturing.

This Run Tester measures Gas and Electrical consumption along with overall functionality of a completed unit. The variable transformer allows the Unit Under Test (UUT) to be run at specific voltages for testing. The integrated Hi-Pot is used for high potential (high voltage) testing to verify electrical soundness.

The control system is integrated with the customer's database to provide real-time data. It is also interlocked with other equipment on the production line to guarantee testing requirements are met in production.

Other Test Systems Available.
